

Data Ethics Framework: JP Morgan Chase

Sharadha Varadharaj

Purpose

The one think that the JP Morgan Chase is focusing on providing the financial services that helps the growth of economy and creating new job opportunities that uplifts the communities by having a high level of respect, excellence, and responsibility to all the stakeholders involved in this process. The major objective of JP Morgan Chase is “The most respected financial services firm in the world, serving corporations and individuals”. This has been achieved by the traditional banking and also going a step ahead to help the communities in which it operates. JPM aims to help people to fulfill their dreams by supporting business and communities to grow and prosper, this has been highlighted with the quotes as “Make dreams possible for everyone, everywhere, every day”. This shows that the organization is committed to accelerate the economic growth, actively encourages, and supports the growth of business and creating an opportunity for people to succeed. Additionally, they help entrepreneurs and businesses to start and expand which results in creation of new job opportunities and aim for a stable economy. This also uplifts the communities globally and thus result in a positive work environment.

JPM furthermore focusses on the values and principles such as integrity, fairness, and responsibility across all levels of the organization. They have also announced that they are interested in creating a new and advanced technology like AI and Data Management, as they believe that these are important for the company to do well in future days.

OUR BUSINESS PRINCIPLES

EXCEPTIONAL CLIENT SERVICE

1. We focus on the customer
2. We are field and client driven; we operate at the local level
3. We build world-class franchises, investing for the long term, to serve our clients

OPERATIONAL EXCELLENCE

4. We set the highest standards of performance
5. We demand financial rigor and risk discipline; we will always maintain a fortress balance sheet
6. We strive for the best internal governance and controls
7. We act and think like owners and partners
8. We strive to build and maintain the best, most efficient systems and operations
9. We are disciplined in everything we do
10. We execute with both skill and urgency

A COMMITMENT TO INTEGRITY, FAIRNESS AND RESPONSIBILITY

11. We will not compromise our integrity
12. We face facts
13. We have fortitude
14. We foster an environment of respect, inclusiveness, humanity and humility
15. We help strengthen the communities in which we live and work

A GREAT TEAM AND WINNING CULTURE

16. We hire, train and retain great, diverse employees
17. We build teamwork, loyalty and morale
18. We maintain an open, entrepreneurial meritocracy for all
19. We communicate honestly, clearly and consistently
20. We strive to be good leaders

JPMORGAN CHASE & CO.

How stakeholders are impacted?

The stakeholders that are associated with the JPM objectives are:

- **Clients** or customers who are using the financial services of the JPM. When we say communities, they may be either national, international, or local communities where the firm operates. The main objective of offering exceptional financial service is to help build trust based relationships with their clients, this assures that reliable and high quality financial services are provided to clients which helps to retain the customer loyalty along with meeting customers satisfaction.
- **Employees**, these includes top-level employees, middle-level employees, and low-level employees, who are engaged in rendering the financial services and managing the strategies of JPM. They focus on building a positive and dynamic work environment for their employees by offering career development opportunities, providing training to enhance their skills, establish a friendly, happy and motivates environment by making their employees feel valued for being a part of JPM.
- **Shareholders** who have showed interest in the organization and have put their money as investments with an expectation of the **ROI**, in order to get high ROI, the company performance should be good and ethical. JPM are in mission to safeguard their shareholders interest by following high standards of performance and comply with the financial regulations. Their operational integrity of ethical business practices guides in maintaining financial stability and promise on returns which are aligned with the expectations of the shareholders.
- **Government and Financial regulatory** bodies who keeps track of the banking and financial operations carried on by the JPM are aligned with the laws and regulations. In case of hiring and supporting **Military Veterans**, which is been mentioned in the company commitment, even the family of those would be one of the stakeholders.

Applicable data ethics principles

Considering JPM mission, vision, and their core principles, they need to align its operations with the key data ethics principles including compliance to related regulations and Acts that assures responsible data management. Regulations that reflect on security and confidentiality are guided by **GDPR**, and **GLBA** commands tight data protection approaches. They are held accountable for their data practices and information security by **SOX** and **FFIEC** guidelines assuring responsible data handling and financial reporting. Transparency in data practices is required under **SEC** and **CCPA** ensuring clear disclosure of data practices to shareholders and the public, additionally GDPR guides JPM in data minimization as to limiting data collection and retention to what is necessary. Fairness and non-discrimination in data use are enforced through **ECOA** and **CRPB**. Principles relating to the privacy protection are guided by **RFPA** insures data minimization. The data quality concerns are addressed by **FCRA** which verifies accuracy of consumer reports. Cybersecurity and Financial Crime regulations compliances such as **CISA**, **AML**, **BSA** holds perfect for addressing cybercrimes, if in case. When focused on the banking operations and regulatory, these banking regulations such as “**Dodd-Frank Wall Street Reform and Consumer Protection Act**”, “**Basel III**”, **FRB**, **FDIC**, **OCC** are crucial to be complied with in the finance industry. In order to make sure the individuals are fully aware of clear and legitimate purpose for data collections, what data are been collected and how their data are being used must be make known at the time of collecting the data. Therefore, abiding to these regulations and principles, JPM operations certify that all data processing are meant to legal and ethical, implementing and following these principles will showcase JPM’s dedication to ethical data management which builds trust among stakeholders with JPM and guide in maintain integrity in its business operations.

Applicable data ethics principles benefits

JP Morgan Chase experiences smooth operations by adhering to these regulations and principles. Regulations such as GDPR, GLBA, SOX, CCPA etc, guides JPM to enrich its market position, builds a foundation of trust of stakeholders and shareholders, nourish its goodwill value which are pivotal in financial industry. As JPM will be dealing with their clients sensitive information's, it is on high priority that JPM must seriously implement rigorous confidentiality and security protocols so as to potentially shield clients data from breach, indicating a foundation for sustained financial health and boosting trust. Transparent in data handling process will uplift confidence among stakeholders. To initiate fairness in services that elevate inclusive financial ecosystem, anti-discrimination laws like ECOA benefit in achieving this purpose. To sharpen decision making abilities, strategies to be followed to manage risk, customer satisfaction and being considered as top-notch financial services in this industry can be achieved by prioritizing high quality, ethical and lawful data management. Further, having a clear and practiced ethical stance makes JP Morgan Chase's work environment better, achieves retention of employees, and helps them contribute good things for the community, which makes people trust them more.

These practices make sure that JP Morgan Chase follows rigid rules and works better. They keep up the customers loyalty and show that JP Morgan Chase is a top company for doing business ethically in finance.

These compliance, will benefit the business by providing a competitive advantage by appealing to stakeholders whose priority is ethical data use. Having these data ethics framework altered or innovated will underpin the sustainable growth in the business for JP Morgan Chase.

Applicable Data Ethic Principles Supported by Ethical Theories

The applicable data ethics principles are advocated by ethical theories for JP Morgan. Normative ethical theories are the principles that guide the business on what is morally right or wrong particularly in decision making. One among the normative ethical theories is **Deontology Theory** which focuses on duties and obligations that are to be carried out by the clients and business which includes duty of protecting the data and privacy that are to be aligned with the individuals rights and autonomy. Sequentially, would be the **Utilitarianism Theory** which emphasises on the maximising the overall benefit and minimize harm. Principles relating to accuracy and transparency in the data management are justified through this ethical theory as the implication of this theory leads to positive outcomes for the stakeholders. Another would be the **Virtue Ethics** which stress on development of morality in terms of honesty, fairness and integrity. Transparency and Accountability principles are underscored by this theory assists in cultivation of the ethical virtue within the organization. **Descriptive ethical** theories describe how individuals should actually behave in morality rather than just prescribing on how they should behave. **Right-Based Theory** focus on individuals rights to privacy, this theory suggests the JP Morgan to recognize individuals ownership of their personal information by seeking proper consent before collecting or using the data. This pins on fairness and equality so that data driven decisions has no influence by any group or individuals.

Sociological Theory that evaluates the social norms, structures and organisation influence on moral behaviour within the society, this serve JP Morgan to understand industry norms, regulatory frameworks and expectations of the stakeholders.

Dr. Shaun Eide, ppts

Aligning Organization Principles with the Ethics of Society

Ethical governance means following the path of moral rules, though it may not lead to the best or profit oriented outcomes. JP Morgan should be rigid in making ethical decisions by designing strong and clear rules in place that everyone can view. JPM should be social responsible, meaning they should be involved in the operations or activities that are widely accepted by the society. Social responsibility are aligned with the utilitarianism that seeks to maximize overall happiness by addressing issues relating to environmental sustainability and community development for well-being of the society. Stakeholder involvement and ethical leadership are aligned with the virtue ethics focus on empathy and fairness through boosting trust and positive organisational culture, this helps in resolving the issues of neglecting the stakeholders and considering their opinion in decision making is important, however, ethical leadership demonstrates integrity and honesty to increase trust and social responsibility within the organisation, addressing issues related to unethical behaviour and lack of trust in leadership. Public advocacy aligns with the right-based and social contract theory, that supports for policies and practices that protect the individual right and autonomy also underlines in resolving the issues regarding societal injustices and inequalities.

Data Governance Model

JP Morgan Chase has adopted a robust data governance framework which assures coordination with the internal policies and the external regulatory bodies through a structured system that involves compliance teams and particular data management teams from various departments. This data governance model designed by JPM centres on maintaining high standards of personal integrity, ethical decision making, compliance with laws and regulations. There are many components that are to be highlighted in the model. In the first place is the enforcement of rigorous Code of Conduct that all employees including CEO and Directors, are compulsory

to follow, which stress the importance of ethical behaviour and legal compliance.

Subsequently, this framework helps JPM in maintaining the *data quality and integrity* through effective decision making, regular audits, quality check and risk management.

Additionally, in the world of increasing in advance technologies which can be advantages if used in a right way, yet, the advancement come along with the cons that

are to be addressed, as JPM has all the sensitive information's of their valuable clients, safeguarding these information's is a big challenge, hence bank employs the same advancement in security measure such as authorized controls, encryption and secure data storage solutions and not being flexible in following the regulations like GDPR, SOX and GLBA that guides bank to ensure *confidentiality of the data*. Furthermore, the model underlines vigorous internal controls and compliance mechanisms which considers current ethics and compliance training provided to all the staff to reinforce the significance of ethical practices and laws. Moreover, framework includes strict and continuous monitoring and reporting practices to make sure that the activities are aligned with regulatory requirements and maintaining standards. Finally, the model promotes the culture of stakeholder engagement, stimulating employees to consult and communicate with the Code Specialists or with the Compliance officers regarding the legal concerns, thereby assuring transparent and accountable business environment. This data governance model proper and true implementation fosters the bank reputation for integrity and ethical conduct in the financial industry.

<https://www.jpmorgan.com/content/dam/jpm/global/disclosures/CO/code-of-conduct.pdf>

JPM Policies, Principles and Procedures

The principles of Regulatory Compliance are been adopted by JP Morgan Chase to ensure compliance with legal and ethical requirements in different aspects of its business.

Regulatory Compliance

JP Morgan pledge to sustainable practices by complying with the policies that support environmental sustainability, these principles include “The Bipartisan Infrastructure Law”, “The CHIPS Act” and “The Inflation Reduction Act”, which supports the bank to maintain the business conduct that advocates environmental stewardship. In the digitalization environment, it is important for the bank to be very transparent, make fair decisions and be accountable for the activities that are been carried out by the bank. Hence, JPM rigorously adhere to the data protection laws which includes, “GDPR” and “CCPA” to ensure that the bank artificial intelligence is used ethically without any bias and involves in protecting the customers information’s by showing a robust determination towards privacy and responsibility in use of these advances technologies. Particular banking regulations such as “The Dodd-Frank Act”, “Basel III” and the rules defined by “The Federal Reserve Board”, “FDIC” and “OCC” are incorporated in the activities of the JPM’s banking operations. Application of these principles would ensure that the bank operates legally by protecting the customers, which their primary mission and to maintain the financial stability. Regulatory compliance like “SEC” and “FINRA” are been implemented to make sure that the JPM’s investments and securities operations are performing with high level transparency and fairly, with no unethical factors involved in it. Lastly, JPM focus on the cybersecurity and financial crime, which is at an increasing rate, to address these issues, regulations like “CISA”, “AML” and “BSA” are been adopted which is crucial for preventing the financial crimes and increasing the cybersecurity framework, this protect both the institution and their valuable clients from any of the frauds and breaches. When we speak about online transactions, it is important to focus on the privacy

issues, as the users are not completely aware of what information is been collected, how are they used, the purpose of these information's. To address these issues, JPM has adopted few privacy policies so that they protect their customers. The following are the General principles adopted to ensure privacy.

General Principles adopted by JPM:

- Description of the online privacy policy
- Targeting customers of U.S. and Canadian
- Handling of children's information based on “Children’s Privacy Policy”
- Information collected are in accordance with the “U.S. Consumer Privacy Notice”
- Applicable privacy law CCPA for California residents
- Additional privacy notices for specific groups , E.g.,” J.P. Morgan Canada Privacy Notice”, “ Merchant Services' Privacy Statement”.

The regulations that fit into the strategic level of the E2IM framework are the regulations that supports clean energy and sustainable practices such as “The Bipartisan Infrastructure Law”, “The CHIPS Act”, and “The Inflation Reduction Act”. These regulations are in alignment of the JPM objective of sustainability and social responsibility.

The governance aspect is aligned with the Data Protection Law and AI ethics such as GDPR, CCPA and others that keeps the company on track to use AI and data management ethically, these regulations help JPM to make the decisions ethically and encourages to take the responsibility of using the technology and the data responsibly.

The Dodd-Frank Act , “The Basel III” and other regulatory bodies like “FDIC”, “OCC”, provides a blueprint of the operations that is to be carried out by the banking and financial sector. These operation structures help to achieve the JPM objective ethically and with no complications.

“SEC” and “FINRA” rules guides the daily activities of investments and securities in JPM. Along with these laws such as “CISA”, “AML”, and “BSA” which are known as operational regulations of JPM manages the risk of cybersecurity. These operational guidelines make sure that the organisation management practices are in track by adhering to the legal requirements and the standards of the finance industry.

JPMorgan Chase's strategy, governance, architecture, planning, management, and application of resources and policies are watched and matched to achieve the main objective of JPM which was mentioned earlier as "the most respected financial services firm in the world, serving corporations and individuals" in the path of following the ethical practices and fulfilling the goal of the innovation.

Case Study: COiN

JP Morgan known for a big American Bank, had to fix the issue of spending lot of time in checking the legal papers for approval or rejection of the credit application, which took lawyers and their loan officers to spend about 360,000 hours every year to complete this task. Hence, JPM developed a machine learning tool known as “COiN” (Contract Intelligence,2017). This tool is used to automatically review and know the legal documents. COiN tool goes through the credit agreements and underlines 150 key points just in seconds, which normally would take hours if done by human. This tool is an unsupervised machine learning, which is beneficial as it can learn and improve the accuracy over time without much help from human. This is carried out in JPM own private cloud, which ensure data security, data privacy. The benefit of COiN is that it completes the task in few seconds, with high accuracy level, and with less cost involved in a long-run. Although, this tool took over 30% of the U.S workforce and around 375 million people worldwide , having noticed this JPM invested in education and job training programs to help people adapt to the changing job market and secure new types of employment.

They are not just trying to replace human work and cost, instead its focusing on solving the real business problems more efficiently. COiN is still in its initial stage, and JPM is now looking to use COiN for more complex tasks, which is part of its strategy in using technology to improve their banking services more effectively and efficiently.

<https://imaginovation.net/blog/ai-in-banking-jp-morgan-case-study-benefits-to-businesses/>

Data Analytics Practices of COiN

JPM objective is to deliver value through AI and Machine Learning, so as to increase the value, company must have clear direction and purpose and follow strategic practices. Structural and tactical practices include investments in technology and use the data platforms, in order to support these strategies, required tools and framework should be adopted in carrying out the day-to-day operations more effectively. JPM main goal is not only to innovate new technology but also to drive risk management, customer satisfaction and business growth. To achieve this objective, JPM use data sharing, cloud technology, and new way of building technology should ensure that their operations matches with their goal. By doing so, it beneficial by staying ahead of other banks, manage potential problems, and also achieve their main purpose of customer satisfaction by using AI in a smart and ethical way. JPM to achieve their objective of being a respected and leading financial services company, should make sure that their resources are used optimally, less risk is involved, should be flexible in adopting the changes, should be engaged in innovations, satisfy customers, keep their employees engaged and also the most important is to follow the law and regulations.

1. **Utility:** The Contract Intelligence was introduced by JP Morgan in 2017, so far, no issues has been arisen against this tool, it is at its initial stage, and are trying to implement bigger tasks in future which is their part of the strategy. Speaking about the evaluation for the utility, COiN has the ability to improve societal well-being by making

financial services more efficient, accessible, and effective eventually enhancing economic and societal wealth.

2. **Beneficence/Non-maleficence:** It is beneficial only when JP Morgan regularly analyses and evaluates the COiN outcomes so as to ensure that it is not making decisions based on any factors like race or gender that may cause harm to the individuals. Also, when these AI models are overloaded with lot of ethical guidelines and rigorous testing to achieve high accuracy may sometimes lead to wrong decisions. In order to avoid these, continuous evaluation of the results must be carried out to make the model achieve fairness.
3. **Justice/Fairness:** To ensure equal treatment and equality among individuals' adoption of fair and transparent data analyses processing is important. This can be achieved by monitoring the analysis process, in terms of how the tool is analyzing the data so as to make decision on the credit application and what information's are been considered in the decision making. Any data that is reflecting the biases or discrimination such as race, gender or geographical data must be excluded so as to make fair decision. Additionally, it should make sure that same criteria is been applied to all the credit applications it considers, by doing so it reduces human bias in credit application decision making.
4. **Verity/Non-deceptiveness:** JP Morgan should be very cautious in collecting the data and feeding the accurate data as an input to the COiN AI model, they should have a regular audit of the data processing and should frequently verify the data that is been collected and fed the same data to the tool, this advocates the decision taken on the credit application of the customers is truthful and non-deceptive.
5. **Autonomy:** Informed choices can be achieved by informing their customers about how their data is being used. They can also implement opt-out choice by controlling their

willingness to share their data. This results in clear consent from the customers for the use of their data in analytics. By doing so, COiN respects customers' autonomy and also customers will be able to understand the purpose and given them the control over to either share their information or not to.

6. **Privacy/Non-invasiveness:** Data collection is not the ultimate goal, once the data has been collected from the customers, it's JP Morgan's duty and responsibility to ensure that these details are protected and safeguarded. This can be ensured by adopting strong data encryption and minimize the access to these information's, where in only few authorities should have the access to these personal details of their customers. In case of COiN, JPM own private cloud, which ensure data security, data privacy.
7. **Necessity:** The main intention of developing COiN tool was to carry out the credit application decision more efficiently by achieving accuracy, completing the task in less time and to analyze the legal documents. Hence, COiN activities should focus only on these tasks. Timely evaluation of these outcomes helps JP Morgan to adopt different invasive means if COiN is not well performing or any changes in the model is required to ensure full and effective utilization of tool and worth for investing on this tool for further improvisation.
8. **Proportionality:** Reduction in cost and quick analyses are benefits to society against potential infringement of individual rights. This should have a balance in the information collected from their customers to that of benefits received in return.
9. **Impact on Human Rights:** Operations carried out by COiN must respect human rights by not using the data analytics to exclude certain customers based on certain criteria of discrimination. No decisions should be taken in favor of the customer based on the details shared which may include their gender, race, religion or from which geographical region they are from. COiN must uphold fairness in its operations.

- 10. Environmental Sustainability:** From the environmental sustainability perspective, JP Morgan should consider energy footprints of operating COiN by using renewable energy resources to power the data centers where it is operating. Probably, they should also invest on the green technologies and adopt optimal data processing. Additionally, as large amount of data has been collected and stored in their private cloud, it should also consider digital waste by discarding the data that is not useful over time.

Data Life Cycle

Data lifecycle that is applicable for JP Morgan are as follows:

Acquisition of raw data which includes clients personal information (name, contact details, account number), transaction data, IP address, device information, browsing activity, market data etc from various sources such as transactions (Online & Offline), customer interaction, online forms, Chase mobile application, third-party sources and Co-branded partners. Collected data is validated for accuracy through cross-checking with other sources and completeness to make sure it aligns with its purpose.

Later, *processes* for implementing the policies, monitoring compliance, managing data breaches, and ensuring continuous improvement in ethical data management. Creating effective communication and getting wilful consent is not enough, the company should make sure that these policies are been implemented by the employees, which makes the company to have high rate of goodwill and also in terms of company consciousness. Following the rules and conditions that are mentioned in the policy is vital. This means that, the purpose of collecting the information is same as mentioned in the policy and that are happening in practical, the information's are being shared to only those who are having the rights and access and are not been shared to any other so as to get monetary benefits. Ensuring careful use of tools, technologies and methods while analysing the data, keeping the users updated on any changes made in the policy. Finally, just periodic checking on employees to ensure that they

are following the rules properly. There should be a regular reviewing of these policies and should have a meeting to get the feedback from the employees and feedback of the customers must be discussed and any changes are required to be made in policy, should be done at the earliest. There should always be a room for improving on how privacy is handled to meet legal rules and perform activities with ease and smooth.

Then, the processed data is made available only to those employees who are known as internal stakeholders and systems that may need permission to execute the functions such as data as input for decision making tools, risk management systems, customer relationship management systems. High security over these vital data are granted proper access just to make sure that only those authorized personnel have access to specific part of the data, by setting up permissions and roles within the data management systems, complete data access is not given to single employee. Later, data so collected and processed are *used* on an aggregated or anonymous basis for daily operations from provide customer services till the end of making decisions, this has directly impacts business outcomes and decisions, also is used for extensive analysis so as to derive insights that guides the bank in analytical use such as framing business strategies, risk assessment, compliance monitoring, using data in machine learning models, performance analysis and also for predictions.

Finally, these important data is *stored and disposed* in accordance with the regulatory requirements as to the timeline for retaining these information. JPM has specific data retention criteria with respect to the nature of the data and its purpose. These sensitive data are protected through encryption, secure data storage solutions and regular security audits which prevents from misuse of data and unauthorized access. JPM archives or deletes the data when they are no longer wanted, by taking the precautionary measures that aligns with the regulatory compliance and bank policies. so that these information's cannot be recovered.

Abbreviations

JPM : JP Morgan Chase

ROI : Return On Investment

GDPR : General Data Protection Regulation

GLBA : Gramm-Leach-Bliley Act

SEC : Securities and Exchange Commission

CCPA: California Consumer Privacy Act
